## SUMMARY

Software Engineer with 6 years in TypeScript, React, and GraphQL, and backend in Java/Spring Boot, Node and Python.

## EXPERIENCE

### Software Engineer III, JPMorgan Chase

Mar 2023 — Jun 2026

#### Chase Card Platform — Customer browsing + Marketer tooling

- Owned end-to-end delivery of customer-facing and internal platform features, partnering with product managers, designers, QA, and backend teams from technical design through production deployment
- Built the card-browsing frontend in **React, TypeScript, Redux, and RTK Query**, using a component-driven architecture on an internal design system, so customers could compare cards across 10+ product lines and co-brand partners on a consistent, maintainable UI.
- Architected a configurable approval workflow used across multiple business teams, implementing role-based authorization, reusable workflow components, and state management for complex multi-step approvals.
- Designed reusable frontend architecture using **React, Redux Toolkit, and RTK Query** to improve maintainability and enable faster feature delivery across multiple product teams.

#### Rewards Earning Engine — Points & Offers

- Built and maintained backend logic for the rewards engine that calculates cardholder points, benefits, promotions, and offers, in a system where the core calculation engine ran on a mainframe banking architecture.
- Designed and implemented **Java/Spring Boot** services that modeled promotion eligibility, rewards configuration, and offer lifecycle management while maintaining backward compatibility across existing integrations.
- Modeled promotion eligibility, offer lifecycle, and validation rules to support configurable business requirements while maintaining backward compatibility with existing rewards processing systems.
- Provisioned and deployed services to **AWS** using Infrastructure as Code (**Terraform/CloudFormation**), creating and managing environments across development, **QA**, and production while supporting **CI/CD deployment** pipelines.

### Software Engineer, Hawk Ridge Systems

Jan 2020 — Feb 2023

- Led frontend implementation of a customer-facing e-commerce platform, translating product requirements into scalable **React** and **Next.js** architecture while collaborating closely with design and backend teams.
- Defined **GraphQL** integration patterns with backend engineers to deliver reliable product, pricing, and inventory data while reducing frontend complexity.
- Owned the **checkout and payment flow** end to end, multi-step forms, address validation, and payment gateway integration, from cart through order confirmation.
- Implemented a **persistent cart** with client-side caching so items survived navigation and refreshes without refetching.
- Built a real-time customer support chat widget using **Socket.io**, handling connection lifecycle, message delivery, and reconnection on the React/TypeScript frontend.

## PROJECTS

### Studio Agent

- Built an AI-powered workflow platform in **Python** using **FastAPI, LangGraph, Pydantic, FFmpeg** and **asyncio** to coordinate multi-agent workflows for video editing and creative automation.
- Designed the frontend in **React** and **TypeScript** with real-time progress updates, streaming execution logs, and reusable components to deliver a responsive and debuggable user experience.

- Implemented end-to-end testing with **Playwright** and **TypeScript** for critical user workflows, ensuring reliable agent execution and frontend behavior as new features were introduced.

## Spacing UI

- Designed and published Spacing UI, a headless **React** component library on **npm** with reusable, **TypeScript**-first components focused on accessibility, flexibility, and developer experience
- Built modular, **tree-shakeable** packages and documented components with **Storybook**, enabling seamless integration into **React** applications while reducing duplicate UI code.
- Established **automated testing**, **linting**, and **CI** workflows to maintain code quality and ensure reliable releases as the component library evolved

## EDUCATION

### *Bachelor of Science in Computer Science*

The University of Texas at Arlington (Aug 2015 — May 2019)

## CERTIFICATIONS

AWS Certified Cloud Practitioner & Developer (2024 – 2028)

## SKILLS

**Frontend:** React, TypeScript, Next.js, Redux Toolkit, RTK Query, TanStack Query, GraphQL, Storybook, Tailwind CSS, React Native

**Backend & Tooling:** Python, Java, Spring Boot, Node.js, GraphQL, REST, PostgreSQL, AWS, Docker, Jest, React Testing Library, Playwright, Vite, GitHub Actions
